

Re-Thinking Packaging!

The high value products being developed for today's markets require a new breed of packaging. Packaging which can be trusted -- both by manufacturer and end user -- to ensure safe transit and storage, to help contain the delivered cost per kilo or litre, to address environmental concerns and to meet the new, stricter, legislative requirements.

Experienced Company, Convenient Supply

With the benefit of almost 50 years industry experience and know-how, Darbox Ltd. has a worldwide reputation for excellence in the development, design, production and supply of innovative packaging solutions.

Our client list includes leading companies in the pharmaceutical, chemical, cosmetic and food ingredient industries.

Production locations in both Israel and Germany ensure that Darbox is strategically positioned to service clients with top-quality packaging, combined with convenient, superior supply.

High-Quality Packaging

Darbox specializes in the development and production of heavyduty, injection-moulded, UN-certified, plastic packaging containers and pails that are open top, nestable and stackable for the storage transportation of hazardous and/or high-value materials (powders, tablets, pastes and liquids).

By definition, the design and manufacturing criteria required to achieve UN certification give our clients the quality and reliability they can trust to ensure safe passage throughout the supply chain. Darbox packaging is equally appropriate even when UN-certified packaging is not mandated.

Unlike traditional metal or fibre packaging, Darbox containers are lightweight yet strong, do not dent, are neither weather sensitive nor suffer from rust or corrosion and are 100% recyclable.

Existing Darbox product families include round (SuperPack™) and square (SquarePack™) containers ranging from 10L up to 70L sizes. Manufactured with FDA/EU standard food grade plastics, Darbox packaging is available in most colours and can be supplied with additional client specific coatings or integrated/removable liners.

Focused and Fast-Track Development

Strongly client oriented, we also offer a complete, highly professional design, project management and support service related to packaging in general and UN containers in particular. Darbox constantly develops new products and solutions, and runs homologation tests according to client specifications and needs.

Currently, Darbox is in a period of focused development creating a series of innovative new product families designed to meet the latest requirements of multinational chemical and pharmaceutical manufacturing companies.

Company Certifications

Darbox is ISO 9001:2000 certified and HAACP approved. Our containers meet the various international codes for the transportation of hazardous goods based on the UN recommendations, including ICAO for air transport, RID/ADR for rail/road, IMDG for sea and the US Department of Transport (DOT) regulations and are REACH compliant.

Contact Darbox today, and find out how our innovative solutions will help you meet your packaging challenges.
